DETAILED ACTION

Allowable Subject Matter

1. Claims 7, 8, 11-13, 24 and 25 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 4, 15, 18 and 21-23 rejected under 35 U.S.C. 103(a) as being unpatentable over Fukumoto et al. (6,583,837) in view of Yamada et al. (6,344,883) further in view of Hsieh (6,466,295).

Regarding Claims 4, 15, 18 and 21-23, Fukumoto et al. disclose a liquid crystal display device including pixel electrodes with slits and protrusions between common electrode and alignment film where in Fig. 1B, it is disclose upper and lower substrates with protrusions 27 corresponding to the central portions of the pixel electrodes 13 and liquid crystal material disposed between the substrates. Fukumoto et al. fail to disclose the required spacer/alignment relationship and the required spacer/protrusion relationship. However, Yamada et al. disclose a liquid crystal display device and method of producing the same where in Fig 12A, rod shaped spacers are labeled as 65 and substrate is labeled as 62. Yamada et al. further discloses a Fig. 29 where alignment layer 68 extends between spacer 65 and substrate 60. Furthermore, Hsieh discloses a

method of forming spacer for liquid crystal display devices where in Fig. 2C element 25 is spacer/protrusion and in Fig. 3D element 35 is spacer/protrusion.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required spacer/alignment relationship and the required protrusion/spacer configuration in Fukumoto et al. as taught by Yamada et al. and Hsie, respectively, in order to have a liquid crystal display device with increased performance.
